

Business Requirement Document (BRD) Amazon Sales Dashboard Project

1. Project Objective

The objective of this project is to analyze Amazon sales data and create an interactive dashboard to understand sales performance, order trends, product performance, shipment analysis, and revenue generation.

2. Tools & Technologies Used

Microsoft Power BI, Microsoft Excel, Python (Pandas), and Jupyter Notebook.

3. Dataset Information

The dataset contains Order ID, Date, Status, Fulfilment, Sales Channel, Category, Quantity, Amount, Ship State, Courier Status, and other sales-related fields.

4. Data Cleaning Process

Removed null values, removed duplicates, fixed data types, converted date columns, removed unnecessary columns, and cleaned inconsistent values using Python Pandas.

5. KPI (Key Performance Indicators)

Total Sales, Total Orders, Total Quantity Sold, Average Order Value, Delivered Orders, Cancelled Orders, Total Categories, and Top Selling State.

6. Dashboard Pages

Page 1: Sales Overview Dashboard. Page 2: Product & Shipment Analysis Dashboard.

7. Charts Used

Line Chart, Bar Chart, Pie Chart, Donut Chart, Tree Map, Stacked Column Chart, Map Chart, and Table Visuals.

8. Business Questions Solved

Identifies top-selling categories, monthly sales trends, state-wise sales, delivery performance, cancelled orders, and B2B order contribution.

9. Expected Outcomes

Helps users track sales growth, improve business decisions, monitor shipment performance, and analyze customer purchasing behavior.

10. Conclusion

The dashboard provides meaningful insights into Amazon sales performance using KPIs and interactive visualizations.

KPI Table

KPI Name	Description
Total Sales	Total revenue generated
Total Orders	Total number of orders
Total Quantity Sold	Total products sold
Average Order Value	Average revenue per order
Delivered Orders	Successfully delivered orders
Cancelled Orders	Cancelled orders count
